Root Canal Treatment Post-Operative Instructions

Your anesthesia will likely remain for several hours. Please avoid chewing in this area to prevent trauma to numb tissues. Also, do the following:

- Remember that it is quite normal to feel some sensitivity for 4 to 5 days following root canal treatment.
- Take prescription pain medications as prescribed.
- Expect the tooth to return to normal sensation about 4 to 6 weeks after treatment.
- Alert your doctor of any adverse reactions to the pain reliever.
- Return to flossing.
- Call the office if you experience any problems.
